TRIAD ER diagram, page 1: clinical core and authorship

Legend
Box: entity. Double box: weak entity.
Diamond: relationship. Double diamond: identifying relationship.
Oval: attribute. Double oval: multivalued attribute.
Solid underline: key. Dashed underline: partial key.
Triangle (ISA): subtypes; it points toward the subtypes.
Crow's feet: two bars = exactly one; circle and bar = zero or one;
circle and crow's foot = zero or many; bar and crow's foot = one or many.
Grey: TRIAD contribution (authorship, revision, agent layer).
Identifier = System + Value (composite, the FHIR Identifier).
Address = Street, City, Region, PostalCode, Country (composite).
Page 2 shows the agent layer, care teams, the audit log and the lineage store.

Within

XOR: a message has exactly one sender (Issues by Staff or Sends by Patient).

TRIAD ER diagram, page 2: agent layer, care teams, audit and lineage

Lineage store (physical layer). It keeps every source FHIR resource as it came in, so TRIAD can link to any FHIR server with almost no data loss.

Mapped entities: Organization, Location, Staff, Patient, Visit, CareTeam, ClinicalEntry (and subtypes), Medication, Message and Assertion.

Legend
Box: entity. Double box: weak entity.
Diamond: relationship. Double diamond: identifying relationship.
Oval: attribute. Double oval: multivalued attribute.
Solid underline: key. Dashed underline: partial key.
Triangle (ISA): subtypes; it points toward the subtypes.
Crow's feet: two bars = exactly one; circle and bar = zero or one;
circle and crow's foot = zero or many; bar and crow's foot = one or many.
Grey: TRIAD contribution (authorship, revision, agent layer).
Identifier = System + Value (composite, the FHIR Identifier).
Address = Street, City, Region, PostalCode, Country (composite).
Dashed box: a copy of an entity from page 1.
